

SUMMARY

Senior DevOps Engineer and Platform Engineer with 15+ years of experience designing, automating, and operating large-scale, mission-critical infrastructure across AWS, Azure, and hybrid environments. Strong background in Kubernetes, Docker, Terraform, Terragrunt, CI/CD, GitOps, observability, cloud security, identity and access management, and platform standardization. Proven success building multi-cloud platforms, improving reliability and deployment speed, and enabling development teams through reusable infrastructure, self-service platforms, and operational excellence. Hands-on experience with Rancher-based Kubernetes administration, cluster operations, infrastructure automation, Jenkins pipelines, Argo CD, Prometheus, Grafana, PostgreSQL, MySQL, and enterprise platform modernization.

EXPERIENCE

Carbigdata Jul 2025 - Present
Senior DevOps Engineer Brazil

- Designed and operated multi-cloud platforms across Azure, AWS, and Magalu Cloud for a large-scale data engineering environment.
- Managed the full infrastructure lifecycle with Terraform, including virtual machines, networking components, and Kubernetes platforms on EKS and AKS.
- Delivered CI/CD pipelines with Jenkins for containerized data workloads, integrating Azure Storage and AWS ECR.
- Built observability solutions with Prometheus and Grafana to monitor APIs, infrastructure health, and service performance across cloud endpoints.
- Improved platform scalability and operational consistency through automation, reusable infrastructure patterns, and cloud-native operational practices.

CI&T Jul 2024 - Jul 2025
Senior DevOps Engineer Brazil

- Architected and implemented a Keycloak-based Single Sign-On platform to strengthen security, identity federation, and user experience.
- Designed and operated enterprise-grade container platforms using Docker and Kubernetes, supporting scalable and portable workloads.
- Developed standardized Terraform architectures for Azure, emphasizing governance, reusable modules, and secure provisioning patterns.
- Led the Coca-Cola Azure Infrastructure-on-Demand initiative, enabling rapid self-service environment delivery for internal users.
- Partnered with development and infrastructure teams to improve platform adoption, security controls, and deployment consistency.

MadeInWeb Jan 2024 - Jul 2024
DevOps Engineer Brazil

- Designed and implemented a local LLM solution to enhance the internal knowledge base and improve engineering access to operational information.
- Integrated documentation systems and developer workflows to improve onboarding speed and day-to-day productivity.
- Reduced deployment lead time through automated provisioning and GitOps workflows using Argo CD and Flux.
- Contributed to platform modernization by improving repeatability, documentation quality, and developer enablement practices.

SKILLS

Cloud Platforms:
AWS, Azure, Magalu Cloud, hybrid cloud, multi-cloud architecture

Containers and Orchestration:
Kubernetes, Docker, Rancher, EKS, AKS, cluster administration, containerized application delivery

Infrastructure as Code:
Terraform, Terragrunt, reusable modules, platform standardization, provisioning automation

CI/CD and GitOps:
Jenkins, Argo CD, Flux, Bitbucket pipelines, deployment automation, release workflows

Observability and Reliability:
Prometheus, Grafana, monitoring, alerting, logging, reliability engineering, operational excellence

Security and IAM:
Keycloak, SSO, identity and access management, cloud security, governance, enterprise access controls

Systems and Scripting:
Linux, Bash, Shell scripting, Python, PHP, Perl

Data and Platforms:
PostgreSQL, MySQL, Oracle, SQL Server, Kafka ecosystem exposure, internal knowledge platforms, LLM-enabled tooling

Architecture and Leadership:
platform engineering, infrastructure architecture, mentoring, cross-functional collaboration, process improvement

CERTIFICATIONS

- AWS Certified DevOps Engineer Professional
- AWS Certified Solution Architect Associate Level
- Google Cloud Certified Associate Cloud Engineer

NTConsult

Jan 2023 - Jan 2024

Cloud Specialist

Porto Alegre, Brazil

- Designed and implemented end-to-end CI/CD pipelines using Argo CD to improve software delivery efficiency and release consistency.
- Built and operated a centralized observability stack, providing real-time visibility into system health, service performance, and operational trends.

Getup

Nov 2020 - Jan 2023

Site Reliability Engineer

Brazil

- Supported reliability, availability, and operational improvement initiatives for production platforms.
- Worked on infrastructure automation, monitoring, troubleshooting, and service stability in fast-moving environments.
- Collaborated with engineering teams to improve incident response, change quality, and operational readiness.

Clinicarx

Aug 2020 - Nov 2020

Head of Information Technology

Curitiba, Brazil

- Directed IT operations and infrastructure support activities, ensuring service continuity and business alignment.
- Coordinated operational priorities across systems, users, and infrastructure services.

Contabilizei

Sep 2018 - Feb 2020

DevOps Manager / QA Manager

Curitiba, Brazil

- Managed DevOps and QA functions, aligning delivery processes, platform stability, and engineering quality objectives.
- Improved automation, team coordination, and operational processes across delivery pipelines and platform support.

Agibank

Nov 2017 - Aug 2018

Infrastructure Architect

Porto Alegre, Brazil

- Designed infrastructure solutions focused on scalability, security, and standardization for enterprise workloads.
- Worked on cloud and platform architecture decisions supporting modernization and operational resilience.
